- **STANDARD LOCK BOX**
A very secure lock box made of 1/4" material and reasonably priced.
- **FLANGED LOCK BOX**
Most cost effective box offered. Allows for possible lag bolt option for easy install in the field.

TECHNICAL SOLUTIONS THAT WORK FOR YOUR BUSINESS

BUILT RITE INDUSTRIES creates solutions to fit the needs of the container industry. BUILT RITE'S Lock Boxes are no exception. Lock Boxes are just a few of the items manufactured for the security of shipping containers and the safe storage of the users valuables from vandals and theft. All of our Lock Boxes are made from steel and range in thickness depending on which model you choose. The Bulldog and Standard Lock Box are made from 1/4" thick material. The Bulldog has an added flat bar flange to raise

the box above the door gasket and creates a nice area for welding. It also incorporates a security angle flange at the top left corner that is welded to the inactive door so no thieves can cut through the padlock tab. The bottom of the box has 5/8" round stock weld to the perimeter to prevent cutting or tearing through the lock box. The Flanged Lock Box is manufactured with 3/16" steel and has a primer finish. The flange allows for welding or drilling holes and lag bolting the box into place while in the field.
